The geared, M2 MultiPlanar MiniRail permits staged correction of complex joint deformities and non-surgical lengthening of musculotendinous contractures. With the M2 positioned over the center of rotation of the deformity, gradual correction in both the radio-ulnar and dorso-palmar planes and compression/distraction of either railed segment are possible.

- Geared rails allow gradual positioning in both radio-ulnar or dorso-palmar planes
- Distraction and compression can be accomplished in either railed segment

Code | Indications
--- | ---
M511 | Complex upper and lower extremity deformities
     | Hand, wrist or foot contractures
     | Indicated for paediatrics and adult patients
